# 2013 Maryland FMP Report (July 2014) Section 8. Bluefish (*Pomatomus saltatrix*)

## **Chesapeake Bay FMP**

Bluefish are a strong fighting fish making them popular with recreational anglers. Commercial harvest of bluefish is less common because the flesh spoils quickly in warm weather, is less firm, and does not freeze well. Bluefish are pelagic and migrate seasonally between Maine and Florida. Estuaries and other nearshore habitats are used as nurseries by bluefish larvae and by juveniles.

The Chesapeake Bay Bluefish Fishery Management Plan (CBFMP) was adopted in 1990 and amended in 2003. The CBFMP Amendment #1 adopted the Mid-Atlantic Fisheries Management Council (MAFMC) and the Atlantic States Marine Fisheries Commission (ASMFC) coastal overfishing definition and rebuilding schedule. Furthermore, CBFMP Amendment #1 introduced ecosystem based management by incorporating water quality improvements, habitat conservation, and multi-species interactions into the management process.

The coastal bluefish stock is jointly managed by the MAFMC and ASMFC. The 1989 coastal FMP was initially developed to address the concerns raised by recreational fishermen about harvest by tuna purse seine fisheries. The bluefish FMP was the first FMP to be developed jointly by an interstate commission and regional fishery management council. The MAFMC/ASMFC FMP was amended by ASMFC in 1998 to prevent recruitment overfishing, reduce fishing waste, improve cooperative management among states, maximize availability, and improve biological understanding. Addendum I to Amendment 1 was approved in February of 2012. The goal for Addendum 1 was to significantly increase the amount of bluefish age and length data collected annually. States having >5% of bluefish harvest, including Virginia, were required to increase sampling; Maryland is not one of those states. MAFMC has amended the FMP four times (2000, 2007, 2011, and 2014). The 2014 amendment limits paybacks due to recreational overages to time periods when bluefish are overfished. Maryland is required to submit an annual compliance report to ASMFC. The compliance report describes the fishery dependent and independent monitoring, current regulations, commercial and recreational landings, and planned management actions.<sup>2</sup>

#### **Stock Status**

Bluefish are managed as a single coastwide stock. The most recent stock assessment update was completed in 2013.<sup>3,4</sup> This assessment projected stock status through 2014. The bluefish stock was determined to be rebuilt in 2008 and currently is not overfished and overfishing is not occurring.<sup>3,4</sup> Catch and juvenile recruitment were included in the age-structured assessment program (ASAP) model to estimate fishing mortality (F) and stock biomass.<sup>3</sup> Fishing mortality has remained low since 2000. In

2012 it was estimated at 0.097 which is below the target F of 0.19. <sup>4</sup> Total stock biomass was estimated at 277 million lbs; 85% of the target biomass. <sup>4</sup>

### **Current Management Measures**

Bluefish allocation among fisheries and coastal jurisdictions is based on historic landings data (1981-1989). Annual stock assessments are used to determine total allowable catch (TAC) for commercial and recreational fisheries. Seventeen percent of the TAC is allocated to the commercial fishery and the other 83% of the TAC is allocated to the recreational fishery. The commercial TAC is managed with state-by-state quotas. Maryland receives 3% of the coastwide commercial quota.<sup>5</sup>

The proposed 2014 Atlantic coast TAC is 4.15 million pounds for the commercial fishery and 16.9 million pounds for the recreational fishery. Maryland's 2014 commercial quota is 218,000 pounds. The bluefish season is open all year (January 1 – December 31) for both the commercial and recreational fisheries. Maryland's minimum size limit is 8" for the commercial and recreational fisheries. Maryland's recreational fishery has a daily limit of 10 fish/per person/day.

#### The Fisheries

Maryland's commercial landings in 2012 were 181,000 pounds <sup>7</sup> and preliminary harvest data for 2013 are 26,500 pounds <sup>8</sup> (Figure 1). The preliminary Marine Recreational Information Program (MRIP) harvest estimate for 2013 was 56,000 fish in Maryland, down from 114,000 fish in 2012 (Figure 2). <sup>7</sup> Catch and release has been a common practice in the recreational fishery since the late 1990s (Figure 2).

### Issues/Concerns

A single-age key developed from limited data was used in the 2012 stock assessment<sup>3</sup> and 2013 update.<sup>4</sup> States are encouraged to increase collection of age data for a broader size range.<sup>4</sup> Additional age/length data is needed to address shortcomings in the stock assessment model.

Age-0 bluefish have a bi-modal (spring and summer) recruitment pattern. The contribution of recruits from each season to the adult population is uncertain, although it has been hypothesized that the spring cohort has a greater influence on adult abundance.<sup>3</sup> This uncertainty is an additional source of model error.

Discard mortality may be an important factor for bluefish stock assessments. Recreational discard mortality data is limited. It is estimated to be 15%, however, it may be higher and should be reevaluated. Commercial discard mortality is uncertain though commercial discards are considered negligible <sup>3,6</sup>.

2003 Amendment #1 to the 199	2003 Amendment #1 to the 1990 Chesapeake Bay Bluefish Fishery Management Plan Implementation Table (updated 7/2014)				
Problem Area	Action	Date	Comments		
Stock Status Management Strategy Management measures for the bluefish stock	Action 1.0 CBP jurisdictions will continue to participate in scientific and technical meetings for managing	1999 Continue	MD and VA staff participate on technical and advisory committees for both MAFMC and ASMFC.		
in the Chesapeake Bay will be based on the most recent coastal stock assessment. As stock assessment data, specific to the bluefish resources in the Bay, becomes available, additional measures will be developed.  Management actions in Amendment #1 of the 1990 CBP Bluefish FMP will gradually	bluefish along the coast and estuarine waters.  Action 1.1  CBP jurisdictions will adopt the  MAFMC/ASMFC overfishing definition, and adhere to the 9-year rebuilding schedule for the coast wide management of bluefish:  F=0.51 (1999-2000)	1999 Continue 2008	The 9-year rebuilding schedule reduced F: F=0.51(1999-2000) F=0.41(2001-2003) F=0.31(2004-2007) The bluefish stock is rebuilt, and overfishing is not occurring.		
rebuild the bluefish stock in the Chesapeake Bay and its tributaries over a 9-year period by reducing F and increasing SSB.	F=0.41 (2001-2003) F=0.31 (2004-2007).	2013	Fishing mortality target is $F_{MSY} = 0.19$ and most recent F estimate is 0.097, below the target.		
Fishery Management Strategy	Action 2.0 CBP jurisdictions will adhere to the commercial TAL established by the MAFM/ASMFC. Individual state-by-state TALs are based on historic landings from 1981-1989. Action 2.1 CBP jurisdictions will continue to require licenses for harvest and sale of bluefish.	Continue 1991	TAL may vary annually. NMFS proposed revised 2014 commercial TALs of 4.15 million lbs for MD and 864,000 lbs for VA. VA's original 2014 TAL was 1.03 million lbs. TAL includes a research set-aside quota.  Commercial licenses are required by each jurisdiction. VA requires an additional permit for commercial hook and line through a limited entry system. In VA, any species not managed under a coastal quota system is subject to the corresponding recreational creel limit for that species in the commercial hook and line fishery.		
	Action 2.2 CBP jurisdictions will adhere to the coastal recreational harvest level established by the MAFMC/ASMFC. Virginia and the Potomac River Fisheries Commission (PRFC) instituted a 10 fish recreational creel limit in 1990. Maryland established a 10 fish recreational creel limit in 1991. Creel limits and minimum size limits may be modified, based on the annual TAL established for the Atlantic coast.	1990 1991 Continue	Historically, recreational landings have accounted for 80-90% of the total catch. MD has a 10 fish creel limit with an 8 inch minimum size limit. VA and PRFC have a 10 fish creel, but no minimum size limit. The proposed coastwide RHL for 2014 is 13.6 million lbs.		
Research and Monitoring Strategy CBP jurisdictions will monitor the	Action 3.0 CBP jurisdictions will continue to collect catch	Continue	Mandatory reporting is in effect in all CBP jurisdictions. MAFMC created a RSA program		

2003 Amendment #1 to the 1990 Chesapeake Bay Bluefish Fishery Management Plan Implementation Table (updated 7/2014)				
Problem Area	Action	Date	Comments	
commercial and recreational fisheries and improve catch and effort data. CBP jurisdictions will also pursue studies to evaluate the social and economic aspects of the bluefish fishery in the Chesapeake Bay.	and effort data from the commercial fishery, and expand the economic data to include dollar value of the commercial fishery and the annual dockside value received for bluefish in CBP jurisdictions.		which allows up to 3% of the TAC to be sold and the money used to fund research projects. Dockside value is available from NMFS.	
	Action 3.1 CBP jurisdictions will assess methods for improving recreational and charter catch/effort data needed to evaluate biological and economic impacts.	Continue  2011 On-going	MD requires logbooks for charter boats. Beginning in 2004, coastal species managed by quota are electronically reported in real time. The MRIP implemented a Chesapeake Bay and Coastal sport fishing license to provide a more comprehensive assessment of recreational fishing statistics than the MRFSS.	
	Action 3.2 CBP jurisdictions will continue to collect fishery independent data on bluefish.	2001 On-going	The ChesFIMS and ChesMMAP surveys provided data used to help manage bluefish in Chesapeake Bay. The ChesFIMS survey ended in 2006. Bluefish are regularly sampled by the MDNR summer pound net sampling program.	
Habitat Management Strategy CBP jurisdictions will utilize the results from the new independent multifish surveys and research projects within the Chesapeake Bay to identify and develop specific strategies to protect bluefish habitat and important forage species.	Action 4.0 CBP jurisdictions continue to set goals for water quality and habitat restoration and protection, to address commitments established under Chesapeake Bay 2000 Agreement.	2003	Bluefish habitat was identified in Amendment #1 to the Chesapeake Bay Bluefish FMP.  President Barack Obama's executive order recommitted federal agencies to Bay restoration and regulatory enforcement.	
species.		2010	EPA established a Bay wide TMDL (aka: pollution diet). Each jurisdiction must establish 2 year milestones for progress towards meeting its TMDL.	
		2012 2013	Legislation has been passed for restrictions on new developments using septic systems. Legislation for a stormwater fee based on impervious surface coverage was enacted.	
			Chesapeake Bay Program monitors levels of mercury, PCBs, PAHs, organophosphate and organochloride pesticides. Ambient water quality criteria of DO, water clarity, and

			chlorophyll-a have been adopted for the Chesapeake Bay.  See Chesapeake Bay Program website for updates on water quality criteria <a href="http://www.chesapeakebay.net/issues/issue/chemical_contaminants">http://www.chesapeakebay.net/issues/issue/chemical_contaminants</a> <a href="http://www.chesapeakebay.net/restoringwaterquality.aspx?menuitem=14728">http://www.chesapeakebay.net/restoringwaterquality.aspx?menuitem=14728</a> nutrient reduction
	Action 4.1 CBP jurisdictions will regulate land and water activities that may negatively impact essential water quality parameters for bluefish, such as temperature, dissolved oxygen and turbidity.	Continue	The CBP continues to implement strategies to reduce nutrients and improve water quality in the Bay. Planting forest buffers, controlling stormwater runoff and reducing agricultural and urban non-point nutrient inputs are part of the current action plan.  MD developed curriculum "Where Do We Grow from Here?" about population growth and its impacts on the Bay.  See Chesapeake Bay Program website for updates on land and water stewardship. http://www.chesapeakebay.net/track/health
	Action 4.2 CBP jurisdictions will monitor activities that could negatively impact submerged aquatic vegetation in areas where bluefish have demonstrated a significant degree of association.	2003 On-going 2012	CBP monitors SAV in the Chesapeake Bay by annual aerial survey. The revised SAV goal adopted by Chesapeake Bay Program is planting 1,000 acres of SAV by 2008 and restoration of 185,000 acres of SAV by 2010. Planting goal revised to 20 acres per year. VIMS annually surveys SAV distribution in Chesapeake Bay. A Chesapeake Watershed Agreement was developed (adopted June 2014) with interim targets of 90,000 acres by 2017 and 130,000 acres by 2025. The 2013 SAV acreage was 59,927.  MD developed a Blue Infrastructure that includes mapping structural habitat and SAV.

Problem Area	Action	Date	Comments
			Regulations are in place to prohibit dredging through SAV beds. Tiered designation and prioritization of SAV beds has not been implemented. Avoidance of dredging, filling and construction impacts to SAV is strictly enforced by MDE and USACE with input from DNR, USFWS, and NMFS. MD has not established undisturbed buffers. VA has established buffer criteria.
	Action 4.3 CBP jurisdictions will monitor important forage species, when identified by fishery independent surveys to insure that activities such as directed fisheries or incidental by-catch in non-directed fisheries, do not adversely affect forage species abundance. If fishing activities are contributing to higher fishing mortality (F) of important managed forage species such as Atlantic menhaden, Atlantic croaker, spot and/or blue	In progress	Fish collected from ChesFIMS & ChesMAPP surveys provided stomachs for predator/prey analyses of juvenile and adult bluefish in the Chesapeake Bay. Variability of the abundance of forage fish in the Chesapeake Bay is also being examined by independent research project out of CBL. The ChesFIMs was discontinued after 2005 because of lack of funding.
	crab, additional management measures may be necessary.	2012	ASMFC determined that menhaden are overfished and that F needs to be reduced. The coastwide TAC is a 20% reduction from the average harvest during 2009-2011. Virginia is allocated 85% of the TAC while Maryland and PRFC are allocated 1.4% and 0.62%, respectively. Implementation began in 2013.
	Action 4.4 CBP jurisdictions will monitor the abundance of important bluefish forage species that are not managed under CBP FMPs, such as bay anchovies and Atlantic silversides	On-going	MD and VA juvenile seine surveys monitor the abundance of anchovies and silversides. Nonmanaged forage fish abundance is examined by an independent, CBL research project.

2003 Amendment #1 to the 1990 Chesapeake Bay Bluefish Fishery Management Plan Implementation Table (updated 7/2014)			
Problem Area	Action	Date	Comments
	Action 4.5 CBP jurisdictions will continue to identify predator/prey interactions, both inter- and intraspecies competition and other interactions that might effect the management of bluefish.	On-going	Data from the ChesFIMS and the ChesMAP surveys will be utilized to identify and delineate ecological relationships. Development of multispecies fishery management plans may result from this data.
		2012	A multispecies predator/prey model is being developed by ASMFC that includes bluefish, menhaden, striped bass, and weakfish.

Bay.	recreational creel limit and Maryland will establish a 10 fish creel limit to minimize wastage (see Action 1.1.2.3).		See Amendment #1 Action 2.2
	2.1.2) Maryland, the Potomac River Fisheries Commission, and Virginia will educate the general public, through the use of information brochures and other means, about the need to reduce the waste problem in the bluefish fishery. Hook and release will be promoted as one method for reducing waste in the fishery.	1991	MD has produced a video & fact sheet on hook & release; ASMFC has also developed hook & release brochure. Will explore other means to educate the public about reducing waste.
	2.1.3) Maryland, the Potomac River Fisheries Commission, and Virginia will begin assessing factors contributing to waste in the commercial bluefish fishery and identifying potential solutions. Issues to be considered include migratory patterns of bluefish, bycatch, the bait fishery, and market demand.	1991	No progress to date.
3 – Research and Monitoring Needs: In order to increase the knowledge and understanding of the bluefish fishery in the Chesapeake Bay, the jurisdictions will monitor the commercial and recreational fishery and improve catch and effort data. The jurisdictions will also pursue studies to evaluate the economic aspects of the bluefish fishery.			
3.1) Maryland, the Potomac River Fisheries Commission, and Virginia will increase the knowledge and understanding of the bluefish fishery in the Chesapeake Bay.	3.1.1) Maryland, the Potomac River Fisheries Commission, and Virginia will improve the catch and effort data collected from the bluefish commercial fishery in the Chesapeake Bay. Recommendations for improving the system include: 1) Coordinate finfish license requirements with the needs of finfish catch and effort reports. 2) Reevaluate the reporting form to include information on what types of gear a fisherman owns, how much they used on a particular day, and how much they caught.	1991	Will be accomplished in conjunction with other fish species reporting. Need to assess licensing, reporting, and follow up systems. VA will pursue mandatory reporting system.  See Amendment #1 Action 3.0

#### Acronyms

ASMFC - Atlantic States Marine Fisheries Commission

B<sub>msv</sub> – Biomass maximum sustainable yield

BRP – Biological Reference Point

CBL – Chesapeake Biological Laboratory

CBP – Chesapeake Bay Program

CBSAC - Chesapeake Bay Stock Assessment Committee

CHESFIMS - Chesapeake Bay Fishery Independent Multispecies Survey

CHESMAP – Chesapeake Bay Multispecies Monitoring & Assessment Program

COMAR - Code of Maryland

EPA – Environmental Protection Agency

F – Fishing Mortality

FMP – Fishery Management Plan

 $F_{msy}$  – Fishing mortality maximum sustainable yield (MSY).

MAFMC – Mid-Atlantic Fisheries Management Council

MDNR - Maryland Department of Natural Resources

MRFSS - Marine Recreational Fisheries Statistics Survey

MRIP – Marine Recreational Information Program

NMFS – National Marine Fisheries Service

PFC – Pennsylvania Fish Commission

PRFC - Potomac River Fisheries Commission

RHL – Recreational Harvest Limit

RSA - Research Set-Aside

SAV – Submerged Aquatic Vegetation

TAC – Total Allowable Catch

TAL – Total Allowable Landings

VMRC – Virginia Marine Resources Commission
